Traffic Records 101

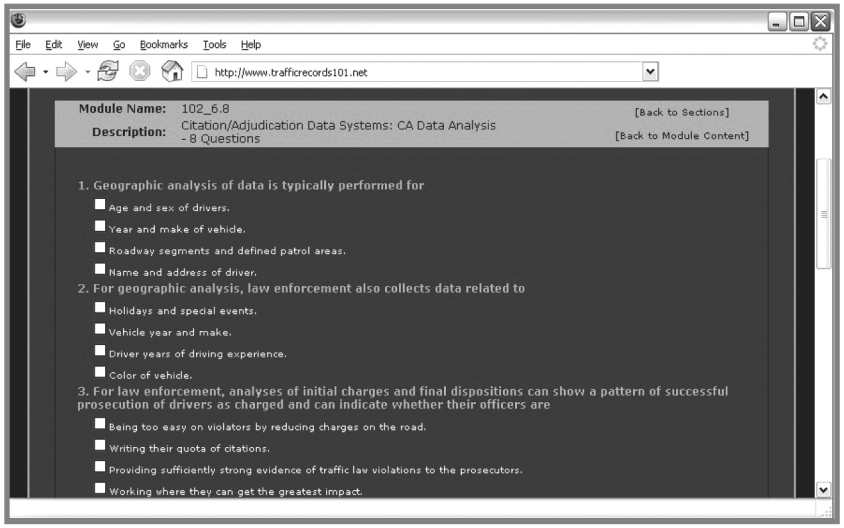
The National Highway Traffic Safety Administration has created an online curriculum for use by State and local traffic safety professionals. This curriculum provides the basics, as well as an in-depth understanding of what is covered in a comprehensive traffic records system.

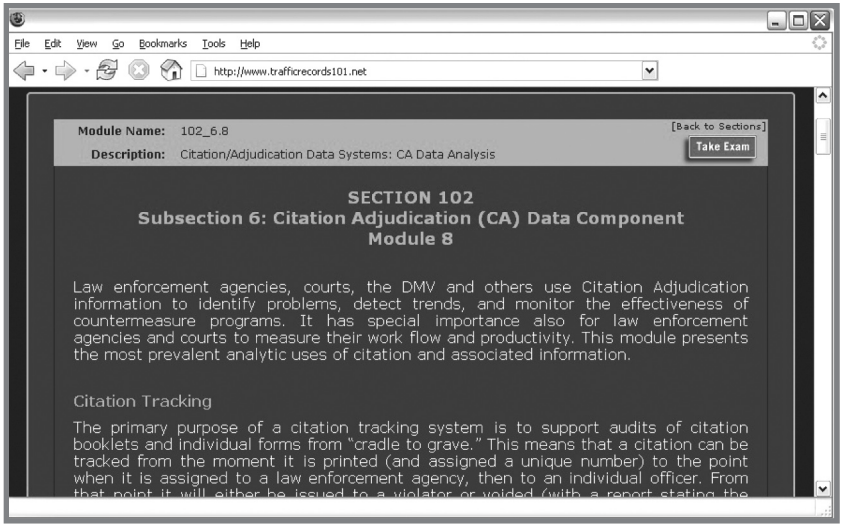
Developed by traffic records experts, the courses include topics that detail specific aspects of traffic records and comprise an in-depth coverage of the major processes and technologies used in the field.

Once registered, users are able to study at their own pace, complete interesting reading assignments that include links to applicable web sites and articles, take rotating examinations on a wide variety of subjects, and track their assignments and scores. The system provides a list of modules and the scores of completed exams. A printed record will show successful course completion.

Continuous Learning

As the field of traffic records continues to transform through new technology and information, the curriculum will grow with more advanced courses so your staff can stay up to date with the latest trends.



Designed for short study sessions.


Complete the courses in order or focus on the areas that interest you!
